Please note

- The ExpoWall modular stand consists of one back wall X and two side elements Y. For a visually unified image, we recommend using the same background or background colour. The print dimensions are listed in the second and third column on page 1.
- The side walls (element Y) may not be visible depending on whether there is a direct neighbouring stand. We therefore recommend designing the side walls with a background colour and not to arrange them with graphics.
- By default, modular stands are supplied with a height of approx. 250 cm.
- The print files must be sent to EGC 2022 (by e-mail or file hosting service) by 31st August 2022: booking@europeangeothermalcongress.eu
- The print file should be sent as a vector graphic in PDF format on a scale of 1:1. Image data should at least have a resolution of 72 dpi when a scale of 1:1 is used.
- A blank frame around the document format should be created when using certain graphics software, such as CorelDraw, Freehand and Illustrator. This is required as these programs do not import the document format into the EPS file.
- Fonts must be converted into curves/paths.
- For preset colours, please send a colour sample and precise colour specifications. If layers overlap, please ensure that none of them are accidentally set to overprint as this may lead to a distortion of colours.
